VisualStudio 2010 Professional

Coding style - based od VS default and Irrlicht samples:

- {} on newline (except for empty blocks)
- tabs for indentation
- parameters seperated by extra space ie function(par1,**<space>**par2)
- splitted cpp/hpp
- using hpp instead of h
- commenting function meaning at definition
- public/private etc keyword prepended by empty line
- no conditions without blocks (ie ~~if(true) doStuff()~~ >

```
                    if(true)
                    {
                            doStuff();
                    }
```

- operators separated by space (ie var<space>=<space>a<space>+<space>b;)
